

[MS-RSWRMSM2006]: Report Server Web Service Specification for Report Management for SharePoint Mode: ReportService2006

Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft's Open Specification Promise (available here: <http://www.microsoft.com/interop/osp>) or the Community Promise (available here: <http://www.microsoft.com/interop/cp/default.mspx>). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting iplg@microsoft.com.
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights.
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

Reservation of Rights. All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

Tools. The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard

specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

Revision Summary

| Date | Revision History | Revision Class | Comments |
|------------|------------------|----------------|--|
| 08/07/2009 | 0.1 | Major | First release. |

1 Introduction

This document specifies an API protocol that is provided by the ReportService2006 Web service for managing objects and settings on a report server [\[MSDN-SS2008RS\]](#) that is configured for SharePoint integrated mode.

1.1 Glossary

The following terms are defined in [\[MS-GLOS\]](#):

SOAP header
SOAP message
WSDL message
WSDL operation
XML namespace

The following terms are specific to this document:

report server: A location on the network to which clients can connect by using SOAP over HTTP or SOAP over HTTPS to publish, manage, and execute reports.

MAY, SHOULD, MUST, SHOULD NOT, MUST NOT: These terms (in all caps) are used as described in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

1.2 References

1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information. Please check the archive site, <http://msdn2.microsoft.com/en-us/library/E4BD6494-06AD-4aed-9823-445E921C9624>, as an additional source.

1.3 Protocol Overview (Synopsis)

The ReportService2006 Web service protocol that is described in this document [<1>](#) provides methods for managing objects and settings on a **report server** [\[MSDN-SS2008RS\]](#) that is configured for SharePoint integrated mode [\[MSDN-SSMode\]](#). Objects and settings that can be managed by the protocol include the following:

- Security tasks, roles, and policies
- Data source connections and credentials
- Parameters for reports
- Report execution and caching
- Report history snapshots
- Schedules
- Subscriptions and deliveries of reports

- Linked reports
- Server system properties

Typically, the client establishes a connection with the server. After the connection is established by using the HTTP [\[RFC2616\]](#) or HTTPS [\[RFC2818\]](#) protocol, **SOAP messages** (see [\[SOAP1.1\]<2>](#)) are used to communicate between the client and the server.

The ReportService2006 Web service protocol uses the security facilities that are built into HTTP or HTTPS for authentication and identification and for channel encryption negotiation. The protocol uses the facilities that are built into SOAP for specification of requests from client to server and for returning data from the server to the client. The following diagram depicts a (simplified) typical flow of communication in the protocol.

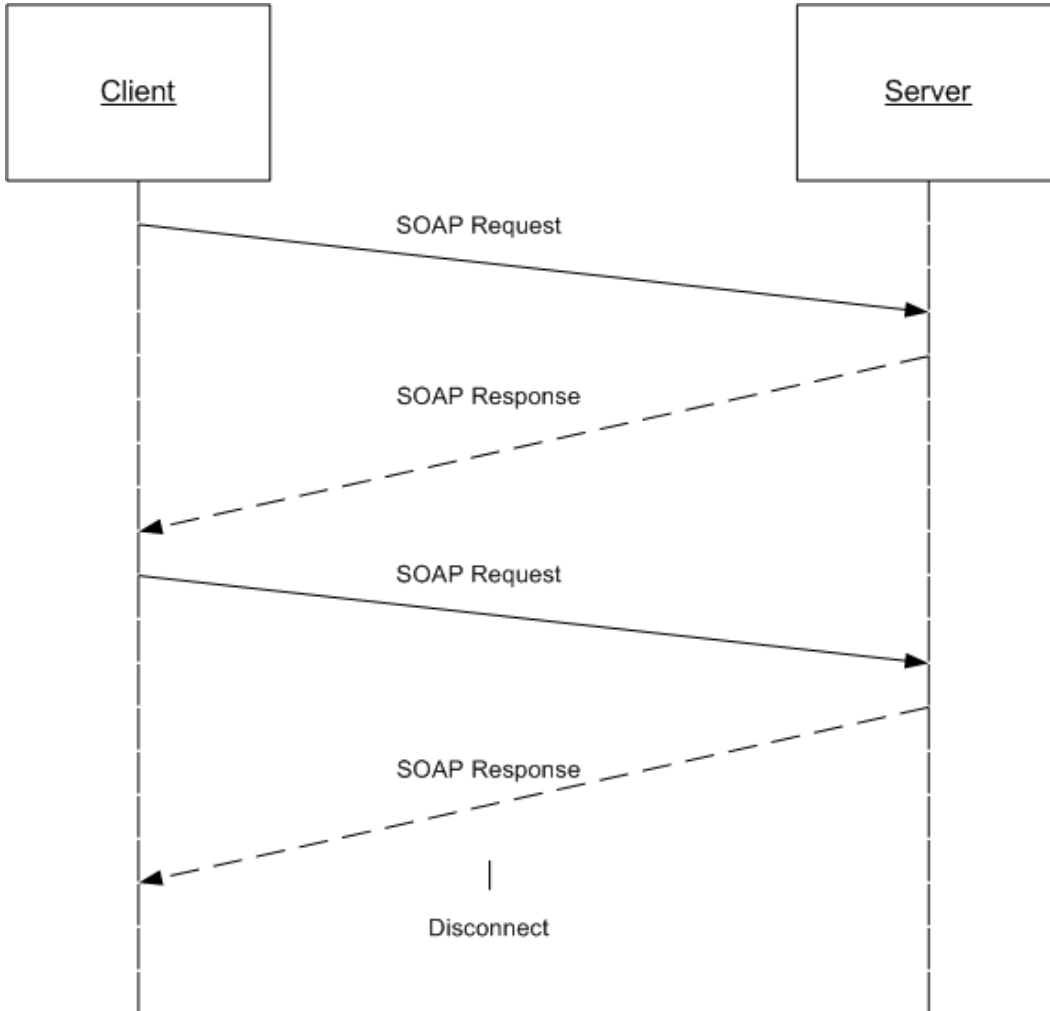

Figure 1: Communication flow for ReportService2006

Each method in the protocol is a SOAP operation that accepts a set of parameters as a SOAP request and returns a set of values as a SOAP response. The client sends a request to the server through a SOAP request message and the server sends return values to the client through a SOAP response message.

The following procedure describes a simple example client/server exchange for creating a report.

1. The client calls the **CreateReport** method, which accepts the following parameters:
 - **Report:** The name of the new report
 - **Parent:** The full path name of the parent folder to which to add the report
 - **Overwrite:** A **Boolean** expression that indicates whether an existing report with the same name in the location specified should be overwritten
 - **Definition:** The report definition to publish to the report server
 - **Properties:** An array of **Property** objects [\[MSDN-PropertyClass2006\]](#) that contains the property names and values to set for the report.
2. The server creates the report, modifies the **ModifiedBy** and **ModifiedDate** properties of the parent folder, and then returns an array of **Warning** objects [\[MSDN-WarningClass2006\]](#) that describes any warnings that occurred when the report definition was validated to the client.

Note If errors occur, the report is not created.

1.4 Relationship to Other Protocols

The ReportService2006 protocol uses SOAP over HTTP as shown in the following layering diagram.

Figure 2: SOAP over HTTP

The ReportService2006 protocol uses SOAP over HTTPS as shown in the following layering diagram.

Figure 3: SOAP over HTTPS

1.5 Prerequisites/Preconditions

The ReportService2006 Web service operates against a site that is identified by a URL. The URL is identified by protocol clients. The protocol server endpoint is formed by appending "/_vti_bin/ReportServer/ReportService2006.asmx" to the URL of the site, as in the following example:

`http://www.contoso.com/ReportSite/_vti_bin/ReportServer/ReportService2006.asmx.`

It is assumed that authentication has been performed by the underlying protocol. The account that accesses this Web service is assigned with proper permissions to the site and its items.

1.6 Applicability Statement

The ReportService2006 Web service enables client applications to create and manage objects and settings on a report server.

1.7 Versioning and Capability Negotiation

This document covers versioning issues in supported transports. The ReportService2006 Web service protocol uses multiple transports with SOAP as specified in section [2.1](#).

1.8 Vendor-Extensible Fields

None.

1.9 Standards Assignments

None.

2 Messages

2.1 Transport

Protocol servers MUST support SOAP over HTTP and MUST support SOAP over HTTPS for securing communication with clients.

Protocol messages MUST be formatted as specified in section 4 of [\[SOAP1.1\].<3>](#)

2.2 Messages

This section defines messages that are used by this protocol. The syntax of the definitions uses XML Schema as defined in [\[XMLSCHEMA1\]](#) and [\[XMLSCHEMA2\]](#) and Web Services Description Language (WSDL) as defined in [\[WSDL\]](#).

The following information describes the steps by which the API is mapped to structures and operations in the Web service.

Each class in the ReportService2006 Web service [\[MSDN-SQL2008RSWS\]](#), except the one derived from **System.Web.Services.Protocols.SoapHttpClientProtocol**, becomes one WSDL type. The following rules apply:

- Non-inherited public properties become elements in the type, with the following exceptions and additional rules:
 - Any property named *AnyAttr* becomes the XSD **anyAttribute** in the type rather than an element.
 - If the name of a property is the concatenation of the name of another property in the same class and "Specified", no element is created for the former property in the type. The **minOccurs** attribute of the element for the latter property is 0. For other properties, the **minOccurs** attribute is 1 unless the API data type is **String**, **Byte[]**, or an array type, in which case the **minOccurs** attribute is 0.
 - The **maxOccurs** attribute of the element is 1 for nonarray types and "unbounded" for array types.
- If the class inherits another class in the Web service, the WSDL type of the inherited class becomes an XSD extension in the WSDL type corresponding to the inheriting class.

Each enumeration in the Web service becomes one WSDL type as an XSD enumeration.

Each class that inherits **System.Web.Services.Protocols.SoapHeader** [\[MSDN-SoapHeader\]](#) becomes one **SOAP header**.

Each method in the class derived from **System.Web.Services.Protocols.SoapHttpClientProtocol** [\[MSDN-SoapHttpClientProtocol\]](#) that is not derived from a base method in a base class or an interface becomes one **WSDL operation** with a corresponding SOAP operation, a request **WSDL message**, a response WSDL message, and corresponding WSDL types. The following rules apply:

- Out parameters and return values of the method become elements in the WSDL type for the response WSDL message.
- Other parameters of the method become elements in the WSDL type for the request WSDL message.

- If the method uses a SOAP header, the WSDL operation contains a WSDL message that has a single part of the WSDL type corresponding to the SOAP header.

An array of a class becomes a WSDL type with an element of the WSDL type corresponding to the class.

The primitive data types used by the API are mapped to WSDL XML Schema types as described in the following table.

| API Primitive Data Type | WSDL XML Schema Type |
|-------------------------|----------------------|
| Byte[] | base64Binary |
| Boolean | boolean |
| SByte | byte |
| Double | double |
| DateTime | dateTime |
| Decimal | decimal |
| Single | float |
| Int32 | int |
| Int64 | long |
| XmlQualifiedName | QName |
| Int16 | short |
| String | string |
| DateTime | time |
| Byte | unsignedByte |
| UInt32 | unsignedInt |
| UInt64 | unsignedLong |
| UInt16 | unsignedShort |

The result of this mapping can be found in the full WSDL in [Appendix A](#) of this specification.

2.2.1 Namespaces

This specification defines and references various **XML namespaces** using the mechanisms that are specified in [\[XMLNS3\]](#). Although this specification associates a specific XML namespace prefix for each XML namespace that is used, the choice of any particular XML namespace prefix is implementation-specific and not significant for interoperability.

| Prefix | Namespace URI | Reference |
|--------|---|-------------------------------------|
| soap | http://schemas.xmlsoap.org/wsdl/soap/ | [SOAP1.1]/[SOAP1.2] |

| Prefix | Namespace URI | Reference |
|--------|---|------------------------------|
| tns | http://schemas.microsoft.com/sqlserver/2006/03/15/reporting/reportingser vices | Defined by current document |
| s | http://www.w3.org/2001/XMLSchema | [XMLSCHEMA1] |
| soap12 | http://schemas.xmlsoap.org/wsdl/soap12/ | [SOAP1.2] |
| wsdl | http://schemas.xmlsoap.org/wsdl | [WSDL] |

2.2.2 Methods

The following table summarizes the set of method definitions that are defined by this specification.

Report Management for SharePoint Mode: ReportService2006 methods are defined in detail in [\[MSDN-RS2006Methods\]](#).

| Method | Description |
|-------------------------------------|--|
| CancelJob | Cancels the execution of a job. |
| CreateDataDrivenSubscription | Creates a data-driven subscription for a specified report. |
| CreateDataSource | Creates a new data source in a SharePoint library. |
| CreateFolder | Adds a folder to a SharePoint library. |
| CreateModel | Adds a model to a SharePoint library. |
| CreateReport | Adds a new report to a SharePoint library. |
| CreateReportHistorySnapshot | Generates a report history snapshot of a specified report. |
| CreateResource | Adds a new resource to a SharePoint library. |
| CreateSchedule | Creates a new shared schedule. |
| CreateSubscription | Creates a subscription for the specified report in the report server database. |
| DeleteItem | Deletes a specified item from a SharePoint library. |
| DeleteReportHistorySnapshot | Deletes an individual report history snapshot for a specified report. If errors occur, the report history snapshot is not deleted. |
| DeleteSchedule | Deletes a shared schedule from the report server database. |
| DeleteSubscription | Deletes a subscription from the report server database. |
| DisableDataSource | Disables a data source that is enabled. |
| EnableDataSource | Enables a data source that is disabled. |
| FireEvent | Raises an event based on the supplied parameters. |
| FlushCache | Invalidates the cache for an individual report. |

| Method | Description |
|--|--|
| GenerateModel | Generates a default model on top of a shared data source. |
| GetCacheOptions | Returns the cache configuration for a report and the settings that describe when the cached copy of the report expires. |
| GetDataDrivenSubscriptionProperties | Returns the properties of a data-driven subscription. |
| GetDataSourceContents | Returns the contents of a data source. |
| GetExecutionOptions | Returns the execution option and associated settings for an individual report. |
| GetExtensionSettings | Returns a list of settings for a given extension. |
| GetItemDataSourcePrompts | Returns the data source prompts for a specified item. |
| GetItemDataSources | Returns the data sources for an item in the catalog. |
| GetItemType | Returns the type of an item in a SharePoint library, if the item exists. |
| GetModelDefinition | Returns the definition for a model. |
| GetModelItemPermissions | Returns the user permissions that are associated with the model item. |
| GetModelItemPolicies | Returns the policies that are associated with a model item. |
| GetPermissions | Returns the user permissions that are associated with a particular item in a SharePoint library. |
| GetPolicies | Returns the policies that are associated with a particular item in a SharePoint library. |
| GetProperties | Returns the value of one or more properties of an item in a SharePoint library. |
| GetReportDefinition | Returns the report definition for a report. |
| GetReportHistoryLimit | Returns the report history snapshot limit for a specified report. |
| GetReportHistoryOptions | Returns the report history snapshot option and properties that are generated for a report. |
| GetReportParameters | Returns the report parameter properties for a specified report. The GetReportParameters method can also be used to validate parameter values against parameters for a specified report. |
| GetResourceContents | Returns the contents of a resource. |
| GetRoleProperties | Returns role information and a collection of associated tasks. |
| GetScheduleProperties | Returns the properties of a shared schedule. |
| GetSubscriptionProperties | Returns the properties of a specified subscription. |

| Method | Description |
|---------------------------------------|---|
| GetSystemProperties | Returns the value of one or more system properties. |
| GetUserModel | Returns the semantic piece of a model for the current user. |
| InheritModelItemParentSecurity | Deletes the policies that are associated with a model item and causes the model item to inherit the policies from its parent. |
| InheritParentSecurity | Deletes the policies that are associated with an item. As a result, the item inherits the policies from its parent. |
| ListAllSubscriptions | Returns a list of subscriptions that have been created by all users of a report server for a given site. |
| ListChildren | Returns a list of children from a specified folder. |
| ListDependentItems | Returns a list of catalog items that reference a specified catalog item. |
| ListEvents | Returns a list of events that are supported by the report server. |
| ListExtensions | Returns a list of extensions that are configured for a given extension type. |
| ListJobs | Returns a list of jobs that are running on the report server. |
| ListModelDrillthroughReports | Lists drillthrough reports that are associated with an entity in a model. |
| ListModelItemChildren | Returns an array of model item child elements. |
| ListModelPerspectives | Lists models and perspectives that are available to the user. |
| ListMySubscriptions | Returns a list of subscriptions that have been created by the current user of the report server for the given site. |
| ListParents | Returns parent items for the given item. |
| ListReportHistory | Returns a list of report history snapshots and their properties for a specified report. |
| ListReportSubscriptions | Returns a list of subscriptions that have been created by users for a given report. |
| ListRoles | Returns the names and descriptions of roles for a given SharePoint site. |
| ListScheduledReports | Returns a list of reports that are associated with a shared schedule. |
| ListSchedules | Returns a list of all shared schedules for a given site. |
| ListSecureMethods | Returns a list of SOAP methods that require a secure connection when invoked. |
| ListTasks | Returns the names and descriptions of tasks that are managed by the report server. |

| Method | Description |
|--|---|
| MoveItem | Moves and/or renames an item. |
| PauseSchedule | Pauses the execution of a given schedule. |
| PrepareQuery | Returns a dataset that contains the fields that are retrieved by the delivery query for a data-driven subscription. |
| RegenerateModel | Updates an existing model based on changes to the data source schema. |
| RemoveAllModelItemPolicies | Deletes all policies that are associated with model items in the specified model. |
| ResumeSchedule | Resumes a shared schedule that has been paused. |
| SetCacheOptions | Configures a report to be cached and provides settings that specify when the cached copy of the report expires. |
| SetDataDrivenSubscriptionProperties | Sets the properties of a data-driven subscription. |
| SetDataSourceContents | Sets the connection properties that are associated with a DataSource object. |
| SetExecutionOptions | Sets execution options and associated execution properties for a specified report. |
| SetItemDataSources | Sets the data sources for an item in a SharePoint library. |
| SetModelDefinition | Sets the definition for a specified model. |
| SetModelDrillthroughReports | Associates a set of drillthrough reports together with a model. |
| SetModelItemPolicies | Sets security policies on a model item. |
| SetPolicies | Sets the policies that are associated with a specified item. |
| SetProperties | Sets one or more properties of a specified item. |
| SetReportDefinition | Sets the report definition for a specified report. |
| SetReportHistoryLimit | Specifies the number of snapshots of a report that the report server retains in the report server database. |
| SetReportHistoryOptions | Sets report history options that specify when a report history snapshot is created for a specified report. |
| SetReportParameters | Sets report parameter properties for a specified report. |
| SetResourceContents | Sets the contents of a resource. |
| SetScheduleProperties | Sets the properties of a shared schedule. |
| SetSubscriptionProperties | Sets the properties of a subscription. |
| SetSystemProperties | Sets one or more system properties for the SharePoint farm. |
| UpdateReportExecutionSnapshot | Generates a report execution snapshot for a specified report. |

| Method | Description |
|----------------------------------|--|
| ValidateExtensionSettings | Validates Reporting Services extension settings. |

2.2.3 Types

The following table summarizes the set of type definitions that are defined by this specification.

Report Management for SharePoint Mode: ReportService2006 types are defined in detail in [\[MSDNSQL2008RSWS\]](#).

| Type | Description |
|--|--|
| ActiveState | Represents information about the active state of a subscription. An ActiveState object is returned by methods that query subscription properties. |
| CatalogItem | Represents an item in a SharePoint library. |
| CredentialRetrievalEnum | Describes the credential retrieval settings for a data source. |
| DailyRecurrence | Represents the intervals at which a scheduled report runs. Intervals are specified in days. |
| DataRetrievalPlan | Represents settings that are required to retrieve data from the delivery query for data-driven subscriptions. |
| DataSetDefinition | Represents information about a set of data to display in a report. |
| DataSource | Represents a data source in a SharePoint library. |
| DataSourceCredentials | Represents data source credentials. |
| DataSourceDefinition | Represents a data source definition in SharePoint library. |
| DataSourceDefinitionOrReference | Represents a data source definition or a reference to a shared data source. |
| DataSourcePrompt | Represents the name of a data source and the prompt to display to a user. |
| DataSourceReference | Represents a reference to a shared data source in a SharePoint library. |
| DaysOfWeekSelector | Represents the days of the week on which a scheduled report runs. |
| DrillthroughType | Specifies the type of a drillthrough report. |
| Event | Represents an event that is registered with the report server. |
| ExecutionSettingEnum | Describes the current execution setting of a report. |
| ExpirationDefinition | Represents the expiration setting for a cached report. |
| Extension | Represents an extension that is registered with the report server. |
| ExtensionParameter | Represents a setting for an extension. |

| Type | Description |
|---------------------------------------|--|
| ExtensionSettings | Represents a delivery extension and its configurable settings. |
| ExtensionTypeEnum | Describes the type of extension that is registered with the report server. |
| Field | Represents a field in a dataset of a report. |
| InvalidDataSourceReference | Represents a state in which a data source reference is no longer valid. |
| ItemTypeEnum | Describes the type of an item in a SharePoint library. |
| Job | Represents a user or system job that a report server is actively processing. |
| JobActionEnum | Describes the process that initiated the job. |
| JobStatusEnum | Describes the status of a job. |
| JobTypeEnum | Describes the type of a job. |
| MinuteRecurrence | Represents the intervals, in minutes, at which a scheduled report runs. |
| ModelCatalogItem | Provides a listing of all model perspectives for a model. |
| ModelDrillthroughReport | Provides information about a model drillthrough report. |
| ModelItem | Provides the semantic definition of a model item. |
| ModelItemTypeEnum | Defines the types that model items can contain. |
| ModelPerspective | Provides information about a perspective of a model. |
| MonthlyDOWRecurrence | Represents the dates on which a scheduled report runs, typically by month, week, and day of the week. |
| MonthlyRecurrence | Represents the days of the month on which a scheduled report runs. |
| MonthsOfYearSelector | Represents the months of the year in which a scheduled report runs. |
| NoSchedule | Represents a state in which no schedules are associated with the execution or snapshot history settings of a report. |
| ParameterFieldReference | Represents a field name that a report server uses to retrieve the value for a parameter. |
| ParameterStateEnum | Specifies the state of a parameter. |
| ParameterTypeEnum | Specifies the data type of a parameter. |
| ParameterValue | Represents data that is used in parameterized reports or in delivery extension settings. |
| ParameterValueOrFieldReference | Represents a user-supplied value or a field name that represents the value of a parameter. |

| Type | Description |
|--------------------------------------|--|
| Policy | Represents groups and users and their roles, which are associated with items in a SharePoint library. |
| Property | Represents the properties of an item in a SharePoint library. |
| QueryDefinition | Represents a query that retrieves the data for a subscription. |
| RecurrencePattern | Represents the recurrence pattern of a schedule definition. |
| ReportHistorySnapshot | Represents a report history snapshot. |
| ReportParameter | Represents a report parameter. |
| Role | Represents a role for use in ssRSnoversion security. |
| Schedule | Represents a schedule and its properties. |
| ScheduleDefinition | Represents a defined schedule. |
| ScheduleDefinitionOrReference | Represents a schedule definition or a reference to a shared schedule. |
| ScheduleExpiration | Represents a schedule that defines when a cached copy of a report expires. |
| ScheduleReference | Represents a reference to a shared schedule. |
| ScheduleStateEnum | Describes the current state of a schedule. |
| SecurityScopeEnum | Defines the scopes of security that are available for a SharePoint site. |
| SensitivityEnum | Describes the sensitivity of a given type: kanatype, case, width, or accent. |
| Subscription | Represents a subscription in the report server database. |
| SYSTEMTIME | Represents a date and time by using individual members for the month, day, year, weekday, hour, minute, second, and millisecond. |
| Task | Represents a SharePoint site or list permission. |
| TimeExpiration | Represents the time, in minutes, that defines when a cached copy of a report expires. |
| TimeZoneInformation | Specifies information specific to the time zone. |
| ValidValue | Represents a valid value for an extension setting or report parameter. |
| Warning | Represents a list of errors or warnings that are returned when a report is published or processed. |
| WeeklyRecurrence | Represents the number of weeks and the days of the week on which a scheduled report runs. |
| WeekNumberEnum | Describes the week of the month in which a scheduled report |

| Type | Description |
|------|-------------|
| | runs. |

2.2.4 SOAP Headers

The following table summarizes the set of SOAP header definitions that are defined by this specification.

Report Management for SharePoint Mode: ReportService2006 SOAP headers are defined in detail in [\[MSDNSQL2008RSWS\]](#).

| SOAP Headers | Description |
|--------------------------|---|
| ServerInfoHeader | Represents information about the report server. |
| TrustedUserHeader | Not intended to be used directly from code. <4> |

3 Appendix A: Full WSDL

For ease of implementation, the full WSDL is provided here.

4 Appendix B: Product Behavior

The information in this specification is applicable to the following product versions:

- Microsoft® SQL Server® 2005 SP2
- Microsoft® SQL Server® 2008
- Microsoft® SQL Server® 2008 R2

Exceptions, if any, are noted below. If a service pack number appears with the product version, behavior changed in that service pack. The new behavior also applies to subsequent service packs of the product unless otherwise specified.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms SHOULD or SHOULD NOT implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term MAY implies that the product does not follow the prescription.

[<1> Section 1.3](#): Beginning with SQL Server 2008 R2, this protocol is supported only for backward compatibility.

[<2> Section 1.3](#): SQL Server 2008 Reporting Services and SQL Server 2008 R2 Reporting Services support SOAP 1.2 [\[SOAP1.2\]](#) binding.

[<3> Section 2.1](#): SQL Server 2008 Reporting Services and SQL Server 2008 R2 Reporting Services support SOAP 1.2 [\[SOAP1.2\]](#) binding.

[<4> Section 2.2.4](#): TrustedUserHeader supports the SQL Server 2008 infrastructure.

5 Change Tracking

This section identifies changes made to [MS-RSWRMSM2006] protocol documentation between March 2010 and April 2010 releases. Changes are classed as major, minor, or editorial.

Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements or functionality.
- An extensive rewrite, addition, or deletion of major portions of content.
- A protocol is deprecated.
- The removal of a document from the documentation set.
- Changes made for template compliance.

Minor changes do not affect protocol interoperability or implementation. Examples are updates to fix technical accuracy or ambiguity at the sentence, paragraph, or table level.

Editorial changes apply to grammatical, formatting, and style issues.

No changes means that the document is identical to its last release.

Major and minor changes can be described further using the following revision types:

- New content added.
- Content update.
- Content removed.
- New product behavior note added.
- Product behavior note updated.
- Product behavior note removed.
- New protocol syntax added.
- Protocol syntax updated.
- Protocol syntax removed.
- New content added due to protocol revision.
- Content updated due to protocol revision.
- Content removed due to protocol revision.
- New protocol syntax added due to protocol revision.
- Protocol syntax updated due to protocol revision.
- Protocol syntax removed due to protocol revision.
- New content added for template compliance.
- Content updated for template compliance.

- Content removed for template compliance.
- Obsolete document removed.

Editorial changes always have the revision type "Editorially updated."

Some important terms used in revision type descriptions are defined as follows:

Protocol syntax refers to data elements (such as packets, structures, enumerations, and methods) as well as interfaces.

Protocol revision refers to changes made to a protocol that affect the bits that are sent over the wire.

Changes are listed in the following table. If you need further information, please contact protocol@microsoft.com.

| Section | Tracking number (if applicable) and description | Major change (Y or N) | Revision Type |
|---|---|-----------------------|------------------|
| 1.2.2 Informative References | 394867 Added reference [MSDN-SoapHttpClientProtocol] | N | Content update. |
| 1.7 Versioning and Capability Negotiation | 406711 Removed references to methods, CreateReportEditSession and GetReportServerConfigInfo, and type, ServerConfigInfo, that have been removed from protocol. | Y | Content removed. |
| 2.2.2 Methods | 395219 Removed CreateReportEditSession and GetReportServerConfigInfo methods from table. | Y | Content removed. |
| 2.2.2 Methods | 373812 Removed TestConnectForDataSourceDefinition and TestConnectForItemDataSource methods from table. | Y | Content removed. |
| 2.2.3 Types | 395219 Removed ServerConfigInfo from table. | Y | Content removed. |
| 3 Appendix A: Full WSDL | 373812 Updated WSDL. | Y | Content update. |
